PRESIDENT'S MESSAGE

Dr. Siu-Fai Lui, BBS MH JP.

President, IFKF-WKA

The key event for the past three months is the launch of the IFKF-WKA flagship program – **Renal nutrition, diet and recipes.**

(1) Inaugural Joint Webinar of ISRNM and IFKF-WKA - 4 May 2022
Pros and Cons of Plant-based Diet for Chronic Kidney Disease

(2) A joint webinar of **ISRNM and IFKF-WKA at the 20th Congress of the International Society of Renal Nutrition and Metabolism.**

We shared how we developed the World Kidney Recipes.

We launched the World Kidney Recipes 53 recipes from 10 countries.

Eat Smart, Eat well, bring the joy back in eating for our patients.

Please visit our website <https://ifkf.org/world-kidney-recipes/>

World Kidney Recipes

Perspectives and Challenges

Dr. SF Lui, BBS, MH, JP.
President, IFKF-WKA 

From diet restriction

→ Positive eating

To eat smart, eat well

Bring the joy back into eating

Enjoy recipes from around from world.

1. Universal recipes

(can be modified for protein, sodium, potassium, phosphate level)

2. Standardisation

- exchanges (protein, carbohydrates)
- high/low content of Na, K, PO₄)

3. Home booking

Welcome to the

International Federation of Kidney Foundations - World Kidney Alliance

- Better kidney health for all.
- Optimal care for people affected with Kidney Disease or Kidney Failure.

World Kidney Recipes

WORLD KIDNEY RECIPES
Eat Smart  **Eat well**

LONG LIVE KIDNEYS AND PATIENT

 **WORLD KIDNEY
RECIPES**

Meal type:
PASTA

Feta and cherry tomato pasta

INGREDIENTS (SERVE 2)

- 100g of Danish feta
- 200g of cherry tomatoes, halved
- 2 cups of your pasta of choice
- 2 teaspoons of dried oregano
- 2 cloves of fresh garlic, chopped finely
- 1 tablespoon of olive oil

PREPARATION

- 1 Preheat the oven to 180°C.
- 2 Roast 1 punnet cherry tomatoes along with the olive oil and garlic for 20 minutes.
- 3 Add to roasting tray the Danish feta and continue roasting for 10 more minutes.
- 4 Once roasted, squash with a fork to combine.
- 5 Add to fresh boiled pasta and mix through. Serve warm.

TIPS

- If available you can use low protein pasta to further reduce the protein in this recipe.
- Use cream cheese or ricotta cheese to reduce the sodium.
- Reduce the cherry tomatoes and substitute half with chopped peppers and onion.
- Don't add salt to the cooking water when boiling pasta.

PER SERVING

*Per serving, the nutrient content level is relatively low medium high not classified

ACKNOWLEDGEMENT
Delicious Quick and Easy Kidney Friendly Recipes

Burrito chapin

INGREDIENTS (SERVE 1)

- 1 egg (50g)
- 2 tbsp of fresh cheese
- 1 corn tortilla
- 1 cup of drained of spinach
- ½ cup of filtered beans
- 1 tsp canola Oil

PREPARATION

- 1 Soak the beans 6 hours before cooking. Transfer the soaked beans to a large pot and cover them with new water. Cook the beans, then set them aside and have them ready.
- 2 Heat (medium) the oil in a large pan. Fry the spinach for 2 minutes, add the egg and cook for 1 min. Add fresh cheese and stir for 2 mins or until cheese is melted.
- 3 Add egg and bean mixture to tortilla and enjoy.

TIPS

- Soak the beans in water for 6 hours before cooking. Discard that water.
- It is recommended to add low-potassium vegetables in the egg mixture (carrot, broccoli, guisquil, chilly pepper etc.) to increase fiber intake.

PER SERVING

*Per serving, the nutrient content level is relatively low medium high not classified

ACKNOWLEDGEMENT

Meal type:
VEGAN-PLANT BASED

Mixed vegetables curry/ Niramish

INGREDIENTS (SERVE 4)

- 50g of carrots small cubes
- 50g of cabbage small cubes
- 50g of potatoes small cubes
- 50g egg plant/brinjal small cubes
- 50g of cauliflower florets
- 100g of chopped onions
- 50g of capsicum
- 2 tbsp of oil
- ¼ tsp turmeric
- ½ tsp Paanch phoron (Indian 5 spice blend)
- 1 tsp ginger & garlic paste
- ¼ tsp chilli powder*
- 1 bay leaf*
- 2-3 green chillies
- ¼ tsp coriander powder
- ¼ tsp Cumin powder
- ¼ tsp garam masala powder
- <1g of salt

PREPARATION

- 1 Preheat a large skillet to medium hot level, add oil and heat until shimmering.
- 2 Add paanch phoron and bay leaf, and then add the chopped onions sauté until soft.
- 3 Add ginger and garlic paste, cumin, coriander, garam masala, chilli powder and a pinch of salt.
- 4 Sauté well, can add a small amount of water to the spices to mix well.
- 5 Add the blanched vegetables, mix well with the spices and cook for 10 minutes.
- 6 Serve mix vegetable curry / mix veg recipe with hot roti or rice.

TIPS

- Portion size: 70-100g depending on potassium levels and restrictions.
- Potatoes are considered high potassium food.
- Soaking procedure after cooking may help leach up to 70% of potassium from potatoes.

PER SERVING

Meal type:
SNACK

INGREDIENTS (SERVE 1)

- 1 egg (50g)
- 2 tbsp of fresh cheese
- 1 corn tortilla
- 1 cup of drained of spinach
- ½ cup of filtered beans
- 1 tsp canola Oil

PREPARATION

- 1 Soak the beans 6 hours before cooking. Transfer the soaked beans to a large pot and cover them with new water. Cook the beans, then set them aside and have them ready.
- 2 Heat (medium) the oil in a large pan. Fry the spinach for 2 minutes, add the egg and cook for 1 min. Add fresh cheese and stir for 2 mins or until cheese is melted.
- 3 Add egg and bean mixture to tortilla and enjoy.

TIPS

- Soak the beans in water for 6 hours before cooking. Discard that water.
- It is recommended to add low-potassium vegetables in the egg mixture (carrot, broccoli, guisquil, chilly pepper etc.) to increase fiber intake.

Meal type:
SEAFOOD

Steamed scallops and tofu with garlic

INGREDIENTS (SERVE 4)

- 6 frozen scallops (120g)
- 1 box of tofu (350ml)
- 1 tbsp of spring onion (chopped)
- 1 tsp of soy sauce for seafood, if available, or ordinary soy sauce
- 1 tsp of oil

PREPARATION

- 1 Defrost the frozen scallops, then cut into halves.
- 2 Rinse and pat dry the tofu, then cut into thick pieces and set aside.
- 3 Mince the garlic, divide into two portions (one portion for frying, one portion for steaming).
- 4 Put a tablespoon of oil and the half of the minced garlic in a pan, turn on medium-low heat and cook slowly until golden brown, set aside (fried garlic).
- 5 Place the tofu on the steaming plate, then the scallop on top of the tofu. Place one teaspoon each of the fried garlic and raw garlic on every scallop.
- 6 Steam over high heat for 5 to 7 minutes, remove from heat and sprinkle with chopped green onion and drizzle with soy sauce. Serve.

TIPS

- Adjust the protein content by the amount of scallops and tofu to be consumed.
- Can add chopped coriander and a little bit of shredded chili to enhance flavors naturally.
- The golden and silver garlic (fried garlic and raw garlic) can increase the tastefulness of the recipe (to reduce the use of high-sodium sauce).

PER SERVING

*Per serving, the nutrient content level is relatively low medium high not classified

ACKNOWLEDGEMENT
Original recipe by Ms. Winnie Leung

Hong Kong Society of Nephrology - Hong Kong Association of Renal Nurses

Meal type:
BEEF/PORK

Hungarian goulash

INGREDIENTS (SERVE 4)

- 350g of beef (or pork) diced into 2x2 cm pieces
- 200g potato diced into 2x2 cm pieces
- 3 medium carrots (half) round sliced
- 2 medium onions (chopped)
- 2 tablespoons of lard/oil
- 1 tablespoon of Hungarian sweet paprika (ground)
- 1 big size tomato, diced
- 2 cloves of garlic, chopped
- 1 teaspoon black pepper
- 1 teaspoon caraway seeds
- 1.5 liters of water

PREPARATION

- 1 In a large pot heat the lard and add the onions. Cook on low heat until the onion looks glassy.
- 2 Pull over the pot from the heat, add the paprika and stir it quickly.
- 3 Put the garlic, tomato and the meat too. Roast the meat for a few minutes and then pour enough water to cover it.
- 4 Season with black pepper and caraway seeds.
- 5 Cover the pot and simmer the meat over medium heat until it is half tender.
- 6 When the meat is half tender, put the carrot into the pot and if it necessary give a little water to it.
- 7 When the meat and the vegetables are almost ready, add the potato and cook for another 10-15 minutes. Cook under cover.
- 8 Taste and then modify the seasoning if necessary.
- 9 Serve with fresh bread.

TIPS

- To reduce potassium content first cook the potato and the carrot a few minutes then soak them in water.
- The potassium content is less in the beef than in the pork.

Low Phosphorus*

Meal type:
PASTA

Low-protein Linguine pasta with "pesto" sauce

INGREDIENTS (SERVE 4)

- 320g low-protein linguine pasta
- 80g fresh basil
- 15g pine nuts
- 30g Parmesan cheese
- 20g rice milk
- 40g extra virgin olive oil
- Marjoram
- ½ a garlic clove

PREPARATION

- 1 Chop the washed and dried basil leaves together with pine nuts, Parmesan cheese, marjoram and garlic in the mixer.
- 2 Pour the mixture in a bowl and if the sauce comes out too thick thin it with rice milk.
- 3 Then add extra virgin olive oil to the mixture
- 4 Boil the water and cook pasta following the cooking directions on the package (linguine cooked al dente have a shorter cooking point).
- 5 Drain and season the pasta with pesto sauce. Add some cooking water to facilitate mixing. Serve it immediately.

TIPS

- The use of low protein pasta reduce protein content.
- Parmesan cheese is rich in salt and phosphorus, pine nuts are rich in potassium and phosphorus but the amount in the recipe is small, enough to enhance flavor.
- Basil is rich in potassium but the amount per serving is low.
- Sodium is that naturally contained in food.

CHEESE

Paneer sticks

INGREDIENTS (SERVE 2)

- 100g of paneer (size of ½ deck of cards)
- 2 tsp of red chilli powder (4g)
- 1 tsp of garlic paste (5g)
- 2 tsp of lemon juice (10ml)
- ¼ cup rice flour (40g)
- ½ cup of oil (120ml) for deep frying
- Add salt as per allowance

PREPARATION

- 1 Cut the paneer block into 10 sticks.
- 2 Make a mixture of chilli paste, garlic paste and lime juice in a bowl.
- 3 Add paneer sticks to the above mixture gently, making sure the paneer sticks are coated well. Set aside for 15 minutes.
- 4 Spread rice flour on a plate.
- 5 Take each paneer stick and roll over the rice flour gently, to coat the paneer stick completely.
- 6 Deep fry in hot oil on a medium heat.
- 7 You can also bake them in a preheated oven at 220°C for 10minutes. Turn them over in between at the end of 5 minutes.
- 8 Serve hot.

TIPS

- Suitable for dialysis and post-transplant patients. A high protein snack.
- You can increase the quantity, prepare the marinated sticks and freeze in airtight containers for later use.
- Patients with elevated phosphorous levels need to take their binder along with this snack.

Meal type:
CHICKEN

Chicken rendang

INGREDIENTS (SERVE 4)

- 220g of boneless chicken breast, cut into small pieces
- 1 cup of red onion
- 4 cloves of garlic
- 3 red chillies
- 1 inch ginger
- 1 inch of fresh turmeric
- 1 piece of turmeric leaf – finely sliced
- 3 pieces of kefir leaves – finely sliced
- 2 tbsp of cooking oil
- ½ cup of water
- ¼ tsp salt (if needed)

PREPARATION

- 1 Heat the oil in a saucepan. Sauté the ground ingredients for a minute or until fragrant.
- 2 Place the chicken and water in a saucepan, use medium heat and constantly stir the cooking until it boils.
- 3 Let the food simmer in low heat until the gravy becomes thicker.
- 4 Add turmeric leaf and kaffir lime leaves.
- 5 Continue cooking until the chicken is tender and the gravy is quite dry according to the desired concentration.
- 6 Dishes can be seasoned with salt in each individual meal (if desired) during mealtimes.
- 7 Serve while still hot.

TIPS

- Using fresh spice rather than spice powder may reduce potassium intake.

PER SERVING	CALORIE	PROTEIN	CARBOHYDRATES	TOTAL FAT	SODIUM	POTASSIUM	PHOSPHORUS

Enchiladas poblanas

poblano enchiladas

INGREDIENTS (SERVE 1)

- 30g of shredder chicken breast
- 2 pieces of corn tortilla
- 1 sliced poblano pepper
- 2 sliced avocado
- 1 spoon of acidified cream*
- 1 tablespoon of margarine
- 30g of skimmed milk*
- 14 pieces of natural peanut
- 1 spoon of canola oil
- 1 pinch of peppermint

PREPARATION

- 1 Follow the double cooking technique with the chicken.
- 2 After cooking it, shred it.
- 3 One week before preparing the recipe, freeze the poblano pepper slices.
- 4 Defrost a few hours before preparing the enchiladas.
- 5 Follow the soaking technique with the poblano slices once thawed.
- 6 In a hot frying pan, toast the peanuts, taking care not to burn them.
- 7 Blend the poblano pepper, peanuts, cream, milk, peppermint, and avocado slices.
- 8 Heat the margarine in a pan and fry the poblano cream with avocado.
- 9 In another pan, heat oil and fry the tortillas in oil.
- 10 Fill the tortillas with shredded chicken, fold and close.
- 11 Bathe the tortillas in sauce.

TIPS

- Those ingredients marked with *: contain phosphorus, do not exceed.
- Modification for dialysis: add debrated breast 60g → protein 29g. Sodium 93mg, potassium 572mg, phosphorus 302mg.

Vegetable paella

INGREDIENTS (SERVE 6)

- 250g rice, uncooked
- 90g onion, chopped
- 160g tomatoes, peeled and chopped
- 50g cucumber, peeled and chopped
- 30g celery
- 75g green pepper, seeded and thinly sliced
- 50ml olive oil
- 1g turmeric
- 600ml water, hot
- To taste garlic cloves
- 3g lemon zest
- 15g parsley, chopped
- 15g thyme, fresh
- 120g cheese, finely grated
- 1g pepper

GARNISHING:

- 50g olives, black, pitted
- 25g chilli or sweet pepper, red, thinly sliced

PREPARATION

- 1 Heat the oil in a heavy-based frying pan and sauté the rice until it is light yellow.
- 2 Add the onion and garlic and sauté for a further 3 minutes.
- 3 Mix the saffron and the hot water and add to the pan. Add the tomatoes and allow to simmer for 15 minutes with the lid on.
- 4 Stir in the cucumber and celery and allow to simmer for a further 5 minutes.
- 5 Stir in the green pepper and allow to simmer for 5 minutes until the rice is just soft and all the fluid is absorbed. Add more hot water if the mixture is too dry.
- 6 Remove from heat and stir in the parsley, thyme and lemon zest. Add pepper if preferred.
- 7 Dish the mixture out into a casserole dish and garnish with olives and chilli peppers.
- 8 Sprinkle the cheese over and place under the grill until the cheese bubbles and browns.
- 9 Serve immediately.

TIPS

- Cheese can be reduced to lower fat and phosphate content or use mozzarella cheese.
- Crush/grate the garlic to add more flavor.
- Lemon zest can be replaced by 1 tsp of lemon juice.
- For a vegan dish, the cheese may be omitted and may not need to be baked.

Meal type:
BEEF

Asparagus with meat and lemon sauce

INGREDIENTS (SERVE 8)

- 200g of beef, cubed
- 1 cup of chopped onion
- 300g of asparagus, either frozen or fresh
- 1 tablespoon of olive oil
- ¼ cup of lemon juice
- 2 cups of water
- 1 teaspoon of allspice
- Black pepper for seasoning
- 1 tablespoon of all purpose flour
- 1 clove of garlic, finely chopped or grated

PREPARATION

- 1 Dry the meat on paper towel. Incorporate meat and flour until meat is covered with flour.
- 2 Roast the meat in olive oil in a thick bottomed saucepan until they turn brown.
- 3 Add lemon juice, water, garlic and spices.
- 4 Cook about 30 minutes until meat is soft.
- 5 Add asparagus and onions and cook for 15 more minutes on mid-low heat. (You may need to add some more water)
- 6 Service suggestion; serve on rice pilaf.

TIPS

- Potassium levels will drop if asparagus are pre-soaked.
- Boiling meat before cooking reduces the phosphorus level.
- Adding unsalted spices/seasonings can be preferred instead of salt.

Kidney health for all: bridging the gap in kidney health education and literacy

Robyn G. Langham¹, Kamyar Kalantar-Zadeh², Ann Bonner³, Alessandro Balducci⁴, Li-Li Hsiao⁵, Latha A. Kumaraswami⁶, Paul Laffin⁷, Vassilios Liakopoulos⁸, Gamal Saadi⁹, Ekamol Tantisattamo², Ifeoma Ulasi¹⁰ and Siu-Fai Lui¹¹ for the World Kidney Day Joint Steering Committee¹²

The high burden of kidney disease, global disparities in kidney care, and poor outcomes of kidney failure bring a concomitant growing burden to persons affected, their families, and carers, and the community at large. Health literacy is the degree to which persons and organizations have or equitably enable individuals to have the ability to find, understand, and use information and services to make informed health-related decisions and actions for themselves and others. Rather than viewing health literacy as a patient deficit, improving health literacy largely rests with health care providers communicating and educating effectively in codesigned partnership with those with kidney disease. For kidney policy makers, health literacy provides the imperative to shift organizations to a culture that places the person at the center of health care. The growing capability of and access to technology provides new opportunities to enhance education and awareness of kidney disease for all stakeholders. Advances in telecommunication, including social media platforms, can be leveraged to enhance persons' and providers' education; The World Kidney Day declares 2022 as the year of "Kidney Health for All" to promote global teamwork in advancing strategies in bridging the gap in kidney health education and literacy. Kidney organizations should work toward shifting the patient-deficit health literacy narrative to that of being the responsibility of health care providers and health policy makers. By engaging in and supporting kidney health-centered policy making, community health planning, and health literacy approaches for all, the kidney communities strive to prevent kidney diseases and enable living well with kidney disease.

Kidney International (2022) ■, ■-■: <https://doi.org/10.1016/j.kint.2021.12.017>

KEYWORDS: educational gap; empowerment; health literacy; health policy; information technology; kidney health; partnership; prevention; social media

Copyright © 2022, International Society of Nephrology. Published by Elsevier Inc. All rights reserved.

Given the high burden of kidney disease and global disparities related to kidney care, in carrying forward our mission of advocating *Kidney Health for All*, the challenging issue of bridging the well-identified gap in the global understanding of kidney disease and its health literacy is the theme for World Kidney Day (WKD) 2022. Health literacy is defined as the degree to which persons and organizations have—or equitably enable individuals to have—the ability to find, understand, and use information and services to inform health-related decisions and actions for themselves and others.¹ Not only is there is growing recognition of the role that health literacy has in determining outcomes for persons affected by kidney disease and the community in

general, but there is an emergent imperative for policy makers worldwide to be informed and cognizant of opportunities and real measurable outcomes that can be achieved through kidney-specific preventative strategies.

The global community of people with kidney disease

Most people are not aware of what kidneys are for or even where their kidneys are. For those afflicted by disease and the subsequent effects on overall health, an effective health care provider communication is required to support individuals to be able to understand what to do, to make decisions, and to take action. Health literacy involves more than functional abilities of an individual; it is also the cognitive

Chronic kidney disease (CKD) confers a high burden of uremic symptoms that may be underrecognized, underdiagnosed, and undertreated. Unpleasant symptoms, such as CKD-associated pruritus and emotional/psychological distress, often occur within symptom clusters, and treating 1 symptom may potentially alleviate other symptoms in that cluster. The Living Well with Kidney Disease and Effective Symptom Management Consensus Conference convened health experts and leaders of kidney advocacy groups and kidney networks worldwide to discuss the effects of unpleasant symptoms related to CKD on the health and well-being of those affected, and to consider strategies for optimal symptom management. Optimizing symptom management is a cornerstone of conservative and preservative management which aim to prevent or delay dialysis initiation. In persons with kidney dysfunction requiring dialysis (KDRD), incremental transition to dialysis and home dialysis modalities offer personalized approaches. KDRD is proposed as the preferred term given the negative connotations of “failure” as a kidney descriptor, and the success stories in CKD journeys. Engaging persons with CKD to identify and prioritize their personal values and individual needs must be central to ensure their active participation in CKD management, including KDRD. Person-centered communication and care are required to ensure diversity, equity, and inclusion; education/awareness that considers the health literacy of persons with CKD; and shared decision-making among the person with CKD, care partners, and providers. By putting the needs of people with CKD, including effective symptom management, at the center of their treatment, CKD can be optimally treated in a way that aligns with their goals.

Barbados Aiming For Expanded Kidney Transplant Programme

BY [JULIE CARRINGTON](#) | MAY 22, 2022 | [TOP STORIES](#)

Dr. Velma Scantlebury presenting Prime Minister Mia Amor Mottley with a copy of her book *Beyond Every Wall: Becoming the 1st Black Female Transplant Surgeon.*

(Photo: C. Pitt/BGIS)

Prime Minister Mia Amor Mottley has signaled her intention to enlist the help of the now retired, first black female Kidney Transplant Surgeon in the USA, Barbadian, Dr. Velma Scantlebury to assist with expanding the current programme at the Queen Elizabeth Hospital (QEH).

The Prime Minister spoke of Government's financial burden in treating the rising number of dialysis patients during a courtesy call with Dr. Scantlebury, who is also a Professor of Surgery at Texas Christian University, University of North Texas Health Centre and Medical School, while in the Committee Room, at Parliament on Tuesday.

Ms. Mottley also wants to see a robust community outreach programme to properly monitor the most critical QEH diabetic outpatients across the island as a means of reducing the number of persons who need dialysis.

Ms. Mottley told the retired transplant specialist that her Government was unable to sustain the high costs, and pointed out that Professor Scantlebury's experience and achievements in kidney disease were needed "on the frontline".

Nothing would give me the greatest pleasure than to have this programme started,” she told the gathering, which included Dr. Scantlebury’s daughter Aisha White; Simone Ward of Forlam Foundation; Minister of Health and Wellness, Ian Gooding-Edghill; Executive Chairman at the QEH, Juliette Bynoe-Sutherland, and QEH Transplant Surgeon, Dr. Margaret O’Shea.

The Prime Minister also received an update on the current transplant programme from Mrs. Bynoe-Sutherland and Dr. O’Shea. On this point, Minister Gooding-Edghill mentioned Spain’s interest in assisting Government with the expansion of the programme.

Ms. Mottley informed the meeting that the testimonies from persons who have donated a kidney to save a life needed to be heard, to get more buy-in from the public about transplants.

Dr. Scantlebury, a strong advocate for transplantation, also mentioned the link between kidney disease and diabetes. She articulated the view that transplantation was a viable treatment option for kidney disease instead of dialysis, and added that she was “here to serve Barbados” in whatever capacity her expertise is needed.

The retired surgeon also agreed that testimonies were important, pointing out that the “right pitch” was needed to effect change.

Hungarian Kidney Foundation

Senior Academy The importance of learning in advanced age

Prof Dr László Rosivall MD, PHD, DSc, FERA, FAPS
President of the Hungarian Kidney Foundation

Learning – At all times – In advanced age

- The beneficial effect of intellectual activity / learning is irrespective of age
- Learning is advantageous even in chronic diseases

„Teachers open the door but you must walk through it yourself.”

Chinese Proverb

Staying healthy serves the well-being of Ourselves, the Family and the Society

Learning through the whole life is a value and interest of the whole Society

Doctors, medicine have social significance Health care system influences the economy

Direct and indirect interactions

(sick society sick economy sick population e.g. COVID)

- **Lengthen the expected lifespan by 1 year GDP 4%**
- **An extra year without disability GDP 11%**

Development and expansion of health care is a key issue of economy!

**Doctors are the key players of the economic development!
Healthcare is a pulling sector**

Staying healthy serves the well-being of Ourselves,
the Family and the Society.

Learning through the whole life is a value and interest of the whole Society

India Renal Foundation

India Renal Foundation is a non for profit health organization working for prevention, treatment rehabilitation, education, and research in the area of kidney disease in Gujarat since January 2002. Mehsana, Vadodara, Surat, Bhavnagar, Rajkot, Kutch Bhuj, Gir Somnath and Himmatnagar and have prominent citizen as advisory committee members at all chapters. Public Awareness programs are the core activities of the organization, which are currently ongoing in the villages of Gujarat.

Kidney Failure is a traumatic and fatal disease, thus it is our responsibility to educate society on the importance of having healthy kidneys for a healthy life. We have been very helpful in the early detection and early diagnosis of rural people.

We helped in providing better treatment in time, prevented major complications and led them to a healthier and better life. We have been very helpful in the early detection and early diagnosis of rural people. We helped in providing better treatment in time, prevented major complications and led them to a healthier and better life. As we all are aware that kidney patients (CRF) have to either take dialysis treatment lifelong or have to undergo a kidney transplant, both of the treatment are very expensive.

During the quarter (April to June 2022 100 awareness program and 52 screening camps (BP, Sugar & creatinine) were conducted across the state of Gujarat. This time our focus was major on rural areas and hence we covered many villages and taluka's in the district of Vadodara, Ahmedabad, Surat, Mehsana, Rajkot, Bhavnagar, Gir Somnath. About 10,000 people benefited from the kidney disease awareness programs.

We observed that their quality of life has improved with the decrease in the financial burden. So patients have been relieved from mental stress and live a better life with dialysis treatment. India Renal Foundation has been supporting needy kidney patients since the year of 2002 under Save a Life Program.

During this quarter we helped Rs. 2,00,000 supporting 54 Needy dialysis patients and Kidney transplant patients by the way of providing dialysis kits, medicines and support for the surgery expenses of making A.V Fistula.

India Renal
Foundation

PRERANA: Prerna is an association of kidney failure patients. We are putting efforts to provide mental, social as well as physical rehabilitation to them by conducting different activities. We also invite Nephrologists to provide information to the patients.

A Prerna program organized in Rajkot on 10th April 2022, in this program, renowned doctors Pratik almani, Dr. Dhriti Almani and Dr. Vrukshaben Mehta gave guidance to the patients who were suffering from kidney transplant problems and other kidney diseases.

Prerna Program organized on 23 april 2022 at Sadvichar Parivar, satellite, Ahmedabad. Well known nephrologist of Ahmedabad, Dr. Umeshbhai Godhani was invited as a speaker. He discussed about difficulties faced by kidney patients during the treatment of dialysis and its solution” 64 prerna members participated with their relatives.

India Renal Foundation – Vadodara Chapter organized Prerna program at Rotary club, old padra road, Vadodara on 5th June 2022. Dr. Rajendrabhai Hathi, a humorist was invited as a speaker. He presented humorous incidence and jokes and made every one laugh. In a program 55 members participated with their relatives.

India Renal Foundation- Surat chapter arranged Prerna program at Gujarat chamber of commerce on 23rd April 2022. 50 prerna members and their relatives present in the program. Dr. Deepak Tamakuwala (nephrologist) and Dr. Praful Shiroya gave guidance. Question asked by the kidney patients and also promote organ donation. Lastly Prerna members enjoyed Antakshari.

India Renal Foundation Bhavnagar chapter was distributed grain kits to the 134 needy kidney patient collaboration with red cross society, Bhavnagar and Akshaypatra Foundation. Kidney Awareness Poster by India Renal Foundation Bhavnagar in the Rathyatra of Lord Jagannathji, the second largest in Gujarat. India renal foundation and Ratnamani metals and tube limited A joint venture organized free Diabetes and Blood Pressure and Kidney Awareness Seminar for 12 villages of Anjar taluka of Bhuj district.

Patient sensitization through social media posts- Care For Your Kidneys-Jan 2022

CARE FOR YOUR KIDNEYS SERIES
SMOKING AND KIDNEY DISEASES

DID YOU KNOW?

- Quitting smoking slows the progression of both kidney and heart failure for people with kidney diseases.
- Kidney transplant recipients who do not quit smoking reduce their chances of survival due to the risk of cardiovascular problems.

CARE FOR YOUR KIDNEYS SERIES
PAINKILLERS AND KIDNEY DISEASE

DID YOU KNOW?

There are three main types of pain killers:
 Non-steroidal anti-inflammatory drugs, NSAIDs (ibuprofen, diclofenac, aspirin), Paracetamol & Opiates (morphine, tramadol)

Long term consumption without supervision can cause kidney damage

BROUGHT TO YOU BY: MOHAN IN PARTNERSHIP FOUNDATION WITH

CARE FOR YOUR KIDNEYS SERIES
SMOKING AND KIDNEY DISEASES

HOW TO QUIT SMOKING

- Set up a plan to quit smoking
- Avoid alcohol and other triggers
- Stay physically active
- Lean on your loved ones
- Eat healthy

Lastly, remember to reward your accomplishments

CARE FOR YOUR KIDNEYS SERIES
PAINKILLERS AND KIDNEY DISEASE

FAK CHECK

- According to the National Kidney Foundation, as many as 3.5% of new cases of **chronic** kidney failure every year may be caused by overuse of painkillers.
- Once kidney disease occurs, continued use of those drugs makes it worse.

CARE FOR YOUR KIDNEYS SERIES
URIC ACID AND KIDNEY DISEASES

FACT#4
Eating fresh fruits and vegetables helps in reducing uric acid levels

TIP
Include the following in your diet -

- Cherries and berries (strawberries, blueberries, etc.)
- Bananas and Pineapple
- Cabbage, Parsley
- Low-fat dairy products
- Bread and cereals (complex carbohydrates)
- Foodstuff rich in Vitamin C – oranges, potatoes, bell peppers, red cabbage

CARE FOR YOUR KIDNEYS SERIES
URIC ACID AND KIDNEY DISEASES

FACT#3
Purine-rich foodstuff should be limited in case of high uric acid levels

TIP

Limit food with high purine content such as -

- Sardines, Mackerel (bangda), Roe
- Red meat, bacon, organ meats, shell fish
- Whole pulses like masur, rajma, chana, chole
- Excess alcohol (including beer, liquor)

Under Patient Education Initiatives webinar on “Nutrition post transplantation- Heart and Lung transplantation” by Dr. Pooja Lakhani and webinar on “Kidney Transplant- Gift of Life” was conducted in cooperation with Nephroplus.

On 15th May, 2022 Dr. Pooja Lakhani, Certified Nutritionist, former clinical dietician with the ICU & Organ Transplant-1 at Apollo Hospital, Mumbai and Founder of POSHAN Mantra shared valuable information on Post Transplant Nutrition, including -balanced quantities and mix of cereals, fruits, vegetables, fats, oil and protein that should be consumed safety and hygiene habits importance of staying fit by regularly exercising.

On May 21st 2022 Mr. Sudhir Dewan conducted a virtual workshop in Punjabi, for dialysis patients, caregivers and dialysis technicians along with NephroPlus Dialysis Centres in Chandigarh. He began by introducing MOHAN Foundation and TRIOMPH - patient support group and discussed the various challenges faced by the dialysis patients and shared that there was an opportunity for the patients to lead a normal, good quality life - through kidney transplant.

Creative

Dr. Pooja explaining about Poshan

What if Donor & Recipient do not match?
 There are More Options...
 As long as the Donor is willing and healthy

Swap Transplants (between near relatives)

By a process called Plasmapheresis, Non-matching blood groups can be made compatible **ABO Incompatible Transplants**

Recipient	Blood Donor			
	O	A	B	AB
O	✓	✗	✗	✗
A	✓	✓	✗	✗
B	✓	✗	✓	✗
AB	✓	✓	✓	✓

Discuss these options with your nephrologist

Mr. Sudhir Dewan’s talk on Kidney transplant

Vlog – From April 2022 till June 2022

Vlog on the Importance of fitness for people on dialysis is uploaded on YouTube on 20th April. This vlog includes the fitness stories of dialysis patients. TURKISH KIDNEY FOUNDATION

Turkish Kidney Foundation (TKF) has a survey conducted to observe community's essential kidney health knowledge level. The purpose of this survey is related to World Kidney Day 2022 main theme "Bridge the knowledge gap to better kidney care". First of all, we needed to observe community's level regarding kidney health.

The survey has conducted by a corporate firm that is specialized on field research and studies. Participants are asked several questions on demographic data, as well as the knowledge on water, salt and sugar intake, exercise, symptoms of CKD, what dialysis is, over-the-counter drug use especially painkillers and antibiotics, publicity reach of TKF and eAccess

According to the results;

- 41% of the attendants are obese
- More than 50% of attendants know the recommended daily amounts for water, salt and sugar intake
 - 57,8% have answered a “6 grams” for daily salt intake for an adult
 - 66,2% have replied “50 grams” for daily sugar intake for an adult
 - 60% have replied “2-2,5 liters of water” per day
- 41% of attendants do not exercise ever
- 67% of attendants use painkillers without prescription and/or physician advice
- 72% of attendants never applied to a GP, internalist or nephrologist for annual routine kidney health check.

Therefore, while this survey presents us a valuable data on population’s point of view on kidney health, it also gives us numerous clues and ideas on how to plan our 2022 WKD campaign.
